

SICUR 2022 International Security, Safety & Fire Exhibition	
Dates:	22 nd to 25 th February 2022 (Tuesday to Friday)
Venue:	Halls: 4, 6, 8 and 10 – IFEMA MADRID
Open to:	Trade only
Opening times:	Tuesday to Thursday: 10:00 to 19:00 Friday: 10:00 to 15:00.
Frequency:	Biennial
Edition:	23
Participating companies:	1,646
Direct exhibitors:	508
Spanish:	420
International:	88
Participating countries:	Australia, Austria, Belgium, Bulgaria, Chile, Czech Republic, France, Germany, India, Italy, Lithuania, Luxembourg, Mexico, Netherlands, Pakistan, Poland, Portugal, United Arab Emirates, United Kingdom, and United States.
Exhibition space:	24,869 sq m.
Sectors:	Occupational Safety: Halls 4 and 6 Fire & Emergency Safety: Hall 8 Security: Hall 10
Other sections and side events:	SICUR Forum , Technical Seminars programme SICUR CYBER connection halls 8 and 10. SICUR RESILIENCIA , Retiro room SICUR START-UPS , 10B09 Innovation Gallery Exhibitions

SICUR 2022 Brings Together the Latest Developments in a Sector Essential for Economic & Social Development

From 22nd to 25th February, the International Security Exhibition, organised by IFEMA MADRID, will hold an edition that will be especially significant for re-establishing and revitalising trade relations and business in the integrated security sector.

Already, 1646 companies have announced their participation in this edition, 508 of them direct exhibitors. There will be a 17.5% international presence, with companies from 21 countries.

SICUR FORUM will discuss the latest industry news. To complete the wide range of content at this edition, we will have the INNOVATION GALLERY, SICUR RESILIENCIA, SICUR CYBER and SICUR START-UPS areas.

Madrid, February 2020. SICUR 2022 is the International Security Exhibition, organised by **IFEMA MADRID**. It will run from **22nd to 25th February**, showing the business world a wide range of innovations in the integrated security field. It will also be a particularly significant edition to help re-establish and revitalise commercial relations and business after the slowdown due to the health crisis. A crisis in which security, risk prevention, and the protection of life and property have demonstrated how vital they are for the economy to function properly and for social progress.

In this context, **SICUR** offers a comprehensive and markedly technological vision throughout halls **4, 6, 8 and 10** of the **Exhibition Centre** by this leading-edge and highly innovative sector. Already, **1646 companies** have announced their participation at this edition, and **508 are direct exhibitors**. The international presence will be 17.5%, with companies from 20 countries: Australia, Austria, Belgium, Bulgaria, Chile, Czech Republic, France, Germany, India, Italy, Lithuania, Luxembourg, Mexico, Netherlands, Pakistan, Poland, Portugal, United Arab Emirates, United Kingdom, and the United States.

To complement **SICUR**'s in-person activity this year, we will have the **SICUR LIVEConnect** online platform. **LIVEConnect** makes this a hybrid event with companies and professionals participating online to complement the in-person event and extend its duration and geographical scope during preparations before the fair and following it. **SICUR LIVEConnect** will offer information about equipment, solutions and services from the sector's suppliers. Its powerful matchmaking tool will allow you to understand your customers' preferences, hold online meetings and schedule face-to-face meetings, and make contacts, among other features.

Salón Internacional de la Seguridad
International Security, Safety and Fire Exhibition

Press Release

SICUR's Main Sectors

As at previous editions, **SICUR** is divided into three main sections. The **Fire & Emergency Safety** sector, representing 23% of the **SICUR**'s content, will show products and equipment for passive and active fire protection in Hall 8. It will also have emergency response solutions such as fire-fighting equipment and vehicles, construction systems and barriers, detection and extinguishing systems, and woodlands protection. For example, there will be the slimmest fire truck model on the market for better accessibility to urban locations, significant connectivity improvements for fire detection centres, an advanced system for locating buried victims, the latest in fire extinguishing foams, or a line of motorised pumps especially suitable for forest fires, and many other innovations. According to the employers' association **TECNIFUEGO**, turnover in active protection was €1,559 million, of which 43% was in manufacturing and 57% in installation & maintenance. The figures for passive protection were €930 million (26% manufacturing and 74% installation & maintenance).

The **Occupational Safety** sector will be in halls 4 and 6, with 34% of the Fair's participation. It will focus on employee health & safety, especially on Personal Protective Equipment (PPE) solutions for preventing occupational hazards and new proposals for occupational health. These halls will be showing the latest lines of protective footwear, goggles and gloves, made with advanced materials and ergonomic and comfortable designs, harnesses, restraints, respiratory equipment, such as masks with a high level of professional and social protection, uniforms and recyclable work apparel made with sustainable fabrics, and other products. The Occupational Safety sector billed around €800 million in Spain, according to the latest figures for 2019. According to **ASEPAL**, the Association of Personal Protective Equipment Companies, although post-Covid figures are not yet available, it forecasts that turnover in PPE products will have grown exponentially.

The **Security** sector will be in Hall 10, showing electronic security, physical security, security services and a wide range of technological innovations for protecting life and property, with 43% of **SICUR**'s participation. This space will show high security and anti-terrorism equipment, intelligent access control systems and alarms, video surveillance, perimeter and intrusion detection, and law enforcement and government security forces equipment. Also on display will be special solutions for the healthcare sector, armoured doors and smart safes, locks that can be managed remotely using a smartphone, as well as the latest generation of drones, and high-performance biometric solutions capable of detecting several faces at once, with mask detection and body temperature measurement, and even a fabric for protecting works of art against fire, among others. Spain's Private Security sector billed €4,214 million in 2020, according to the latest **APROSER** report, which includes the most recent figures for the industry. Turnover in the Surveillance segment was €2,560 million, up 0.9% on the previous year. Systems and Alarms also increased revenues by 0.5% to €1,393 million, and Cash in Transit closed the year with €261 million.

SICUR CYBER

This edition will also include a specialist space for cybersecurity, **SICUR CYBER**. This space focuses on solutions and tools for protecting

Press Release

corporate information, systems and data against cyber threats. It is organised in partnership with **Red Seguridad & Seguritecnia**. **SICUR CYBER** will offer a programme of talks and presentations to promote cybersecurity knowledge and culture in the wider security industry and give the security industry a platform to discuss its needs and advances.

More information about SICUR CYBER

SICUR RESILIENCIA (RESILIENCE)

SICUR RESILIENCIA focuses on the modern concept of Resilience for Businesses and Organisations. It is organised in partnership with the Spanish Technological Platform for Industrial Security, **PESI**. On Thursday, 24th February, it will host a workshop on the **R&D&I** call under **R&D&I** workshop on **Horizon Europe's Cluster 3: Civil Security for Society**, the **International S2R Congress (SAFETY & SECURITY RESEARCH IN EUROPE)**, and the **S2R Innovation** and **Women & Security Management Awards**.

More information about SICUR RESILIENCIA

SICUR FORUM

Another primary focus of **SICUR** is the **SICUR FORUM** programme of talks, where experts will address new challenges and demands in global security. It will cover topics such as *Civil Security for Society, Women and Security, Hiring Security Services*. Participants will discuss operational security in emergency interventions, and pandemic crisis management, with demonstrations of technological solutions. There will also be a workshop on drones to discuss new incident response technologies and innovations and new challenges in fire-fighting. **SICUR FORUM** will also have in-depth coverage of coordination between public health and occupational health, the new challenges in occupational health and well-being, among many other topics.

SICUR FORUM Programme

INNOVATION GALLERY

The **INNOVATION GALLERY** at **SICUR** will preview current research & development work by companies in the security sector. On this occasion, the jury has selected 31 products that stand out for their level of innovation in design and technology. By sector, ten of these products apply to **Fire & Emergency Safety**, fifteen are for **Security**, and six for **Occupational Safety**.

Selected Products in the Innovation Gallery

SICUR START-UPS

SICUR START-UPS is a dedicated space to support and promote new projects and entrepreneurial companies. This year, it showcases security solutions by **MANGOS COMODYN**, **RADICAL ARMOUR**, **TECNOPATENTE** and **HYDECONTROS**. These include a device to prevent musculoskeletal injuries, a technology for protective clothing for security guards, an automatic fire extinguishing device and a service for electronic sweeping by counter-surveillance technical inspectors.

Press Release

Security & Emergency Forces and Agencies Taking Part

As in previous years at SICUR, there will be participation by the **Guardia Civil, Mossos d'Esquadra (Catalonia Police), Ertzaintza (Basque Police), Municipal Police, SAMUR – Civil Protection, Madrid City Council Fire Brigade, the Madrid Region's 112 Security and Emergency Agency, and the Military Emergency Unit (UME)**. These organisations will offer engaging activities, workshops and demonstrations at their stands to enable attendees to learn about some of the innovative equipment they use in their interventions and the best practices of these great security professionals.

SICUR, a Safe Space

To ensure that **SICUR, IFEMA MADRID** happens as usual, there will be rigorous health checks and safety measures. **SICUR** will require all exhibitors and visitors from the EU to show a vaccination certificate. Attendees from other countries not members of the **EU Digital Certificate system** must show their **Spain Travel Health QR code**. Attendees unable to provide either of these documents will be asked to show a negative result of a COVID test (**PCR or Antigen**) performed within 24 hours before the **SICUR** access check. **IFEMA MADRID** has a test facility for this purpose.

We will also enforce a rigorous protocol of measures and systems to ensure the safety of all exhibitors and visitors, validated by the Madrid Regional Government's Health Department. There will also be capacity control in all the halls, with automated people counting systems and an intelligent digital system for analysing spaces, capacity, and attendee behaviour. There will be crowd control at all times, mandatory wearing of **FFP2** masks to access the **SICUR** venue, and temperature checks that are in place at all fairs.

There will also be strict protocols in catering facilities, with spacious outdoor seating areas.

In addition to this, **IFEMA MADRID's** facilities are equipped with an advanced and powerful ventilation system that filters the air, prevents it recirculating, and ensures complete renewal every twenty minutes to prevent the spread of pathogens. These measures are complemented by the careful organisation of people flows and layout of spaces to ensure safe interpersonal distancing, hand sanitiser gel and disinfectants throughout the premises, and contactless digital passes.

SICUR START-UPS Is Looking for Entrepreneurs for Its Second Edition

As part of SICUR, and focusing on providing visibility to innovative projects by start-ups and companies with broad potential for application in the safety & security field.

The selected projects and companies will be invited to participate in the SICUR START-UPS meeting point for business networking and be part of the Fair's communications campaign.

Madrid, 27th December 2021. The next edition of **SICUR**, the International Security & Safety Exhibition, organised by **IFEMA MADRID** at **Feria de Madrid** from **22nd to 25th February 2022**, launches the second call for **SICUR START-UPS**, aimed at entrepreneurs. It will be a platform to bring together innovative business projects and start-ups with broad potential for application in the safety & security field.

This new space aims to highlight and support these business projects and start-ups. Applicants should register at <https://forms.gle/2f8urGh21c9RJrxn9>.

Those selected to participate will be invited to participate in the **SICUR** meeting point for business networking and boost their visibility as part of the Fair's communications campaign.

Specifically, they will be able to use the **SICUR START-UPS** group stand in one of the **SICUR** halls for networking and meetings during the Fair. This stand will have a seating area with tables for greeting visitors, a reception service and complimentary Wi-Fi. It will also have fixed desks with branding for the different participants to use at their convenience, occasionally or during the whole Fair.

The Fair will send out the **SICUR START-UPS** participant list and announce the meeting point and how to make appointments for meetings there.

Business projects and start-ups participating in **SICUR START-UPS** will be given special prominence, visibility and notoriety in **SICUR**'s communications campaign through press releases, newsletters, social networking, its website and visitor's guide, and other tools aimed at both the media and the trade, and in general to the integrated security sector.

Business projects and start-up companies that meet the following conditions may participate in **SICUR START-UPS**:

Ana Uruñuela
MCE Press Officer

Salón Internacional de la Seguridad
International Security, Safety and Fire Exhibition

Press Release

- Its product(s), solution(s) or service(s) are aimed at the safety & security field and are technology-based.
- If the company is incorporated, it must have been created after 1st January 2020. Business projects without an incorporated company may participate.
- If the business is already operating as a company, it must have had a turnover of less than €50,000 since it was founded.

Candidates must complete the Submission Form by **1st February 2022**. **SICUR** will assess the applications and select the business projects and start-ups to participate in **SICUR START-UPS**.

The assessment criteria for the project will be its degree of technological innovation, degree of novelty for the safety & security sector, potential for application and impact in the safety & security sector, internationalisation potential, and scalability.

Registration form and conditions of participation:

SICUR 2022 Presents Its Complete and Representative INNOVATION GALLERY

A jury of professional experts from different sectors has selected 31 products. Ten are for Fire & Emergency Safety, fifteen for Security and six for Occupational Safety.

Organised by IFEMA MADRID, SICUR 2022 will be held from 22nd to 25th February at the IFEMA Exhibition Centre

Product photos SICUR 2022 INNOVATION GALLERY

Madrid, 27th January 2022. As at previous editions, **SICUR's Innovation Gallery** will provide an engaging perspective on the advances in research, development and innovation by companies in the security sector. It is part of the International Security Exhibition organised by **IFEMA MADRID** from **22nd to 25th February**, at **the Exhibition Centre**.

This year, a jury of professional experts from different sectors has assessed the exhibiting companies' entries and selected **31** that stand out for their high degree of innovation in design and technology. By sector, ten of these products apply to the field of **Fire & Emergency Safety**, fifteen are for **Security**, and six for **Occupational Safety**.

Among the innovations in Fire & Emergency Safety, this year's Gallery highlights **Rapid Bracket** for installing fire detectors by **Activi Security and Systems SL**. It drastically reduces costs and eliminates the need for unsightly access hatches. The **T00 Fuel Indicator** valve separates water in hydrocarbon storage tanks. The **BERMAD 450-80** hydraulic valve is used to fill water storage tanks for PCI Services. Both these are by **Alfa Bienes y Servicios, SL**. **Buff** presents its **FIRE-FIGHTER PARTICULATE HOOD** balaclava with powerful flame retardant properties and is highly recommended for fire-fighters. **Denios** presents its **DENIOS Connect** system for storing hazardous products.

There are also three entries from **Siemens**. **SINORIX SDU** is an advanced extinguishing system that avoids any structural damage to the building in which it is installed. **SINORIX LIBESS** is a combined detection and extinguishing system for fire protection in containers with lithium-ion batteries. **DESIGO CC with Real-time BIM Viewer** is a

Press Release

management platform for ensuring the safety and productivity of a building's facilities more efficiently.

In this sector, the Gallery also presents the **SHUB** stabilisation system by **Urban Technology, SL**, for working quickly and safely with a standard spreader as a lifting device. **Fendium polymer-enhanced steel pipe** by **Viking** provides enhanced corrosion protection for increased durability and efficiency in fire extinction systems.

In the **Security** field, the jury has selected the **V-Lock for industrial vehicles** that uses ultra-secure technology from **Accesorios y Resortes, SL (AYR)**. There are two new products from **Ajax Systems**: a security system control panel for wireless devices, **Ajax Hub 2 Plus**, and a wireless outdoor motion detector with an integrated camera for monitoring alarms, the **MotionCam Outdoor**.

From **Bosch Service Solutions**, the **Innovation Gallery** features the **FLEXIDOME IP 8000i X** camera that perfectly balances high resolution with sensitivity to extremely low light using starlight technology and its data-based video management system that uses predictive solutions, the **BVMS Map-Based Tracking Assistant**.

To complete the **Security** showcase, there are also robotics innovations, with the **BlackBird** solution by **Casmar Electrónica**. **BlackBird** is a fully autonomous drone that can respond quickly and automatically to alarm events. There are also three proposals from **Dahua Iberia**: the **Dahua ITC431 AI Enforcement Camera** for road enforcement with two-lane coverage and capturing images of vehicles up to 120 km/h. Their **PT9621 Thermal series** combines a thermal camera for surveillance in total darkness and an optical camera to confirm details up close, while the **Dahua Radar series** provides global wide-range monitoring.

Other entries in the **Security** sector include **DORLET's Virtual Credentials** smartphone system for iOS and Android, **Trucal Technology for XCell sensors**, by **GEA QUALITY SLU**, which significantly reduces toxic gas leak detection failures, and the **Unicorn integrated surveillance platform**, by **LONG XIANG EXPORTACION IMPORTACION 10/10**. **OPTEX SECURITY** is showing its highly accurate **REDSKAN Pro** laser sensor for intrusion detection with LiDAR technology. The **02PN20v3** arch metal detector from Siemens has an integrated fever detection system. **ZKTeco** presents its **FMD 1.0** mobile phone detector.

In the **Occupational Safety** category, the **SICUR** Gallery presents **FLY LITEBASE MATRYX LOW** by **Diadora Utility**, which combines the lightness of a safety shoe with maximum performance. The **Combi Prime** ultra-compact telescopic aluminium stepladder and the **Lock Jaw Ladder** accessory for fixing ladders in support position to gutters are both by **Hispano Industrias Svelt SL**. The **G7c Connected Personal Monitor** provides direct connectivity using its SIM card. The **ISens** wireless gas sensor with real-time cloud software functions are from **Sensotran, S.L.** The **SV104** personal noise dosimeter is by **Svantek Spain**.

PRODUCT DESCRIPTIONS:

FIRE & EMERGENCY SAFETY

Activi Seguridad y Sistemas SL. Stand - 8A07

Product: Rapid Bracket

A bracket for fixing fire detectors on false ceilings, it is compatible with almost all ceiling types and a wide variety of models. It significantly reduces installation costs and eliminates the need for unsightly access hatches, and has a modern-looking finish. Rapid Bracket weighs only 1.2 kg in its tallest form. It can mount detectors up to 128 mm in diameter. It has an intelligent fastening design for mounting on ceilings with thicknesses from 8mm to 32mm, and rapid device maintenance and testing.

Alfa Bienes y Servicios, S.L. Stand - 8G02

Product: T00 Fuel Indicator

The T00 separation valve separates water in hydrocarbon storage tanks. The valve's design gives a tight and flexible seal to prevent any spillage of hydrocarbons into the containment basins. It eliminates contact with any aerosols and vapours generated by these products.

Alfa Bienes y Servicios, S.L. Product 2: BERMAD 450-80

FP-450-80 is a hydraulic valve designed explicitly for Fire Protection Services. The most popular application for the valve is filling water storage tanks for fire protection services. The valve design provides a flexible and leak-proof seal based on the novel VRSD (Vulcanized Radial Seal Disk) technology which employs rubber-based materials to produce a solid radially-vulcanised disc. The valve is hydraulically operated and remains closed as long as the tank maintains a water level. The Bermad Model 80 pilot control can open and close the valve according to the difference in pressure exerted by the water, depending on the height of the water in the tank.

Buff, Stand - 6 B07

Product: FIRE-FIGHTER PARTICULATE HOOD

Balaclava (hood) with flame retardant properties, consisting of two layers of a mixture of Dupont aramid fibres, flame retardant viscose, antistatic fibres, and elastane. In head and neck areas most exposed to toxic particles, there is an intermediate layer of Nomex Nano Flex® material that acts as a protective barrier, keeping harmful nanoparticles away from the wearer's skin. This product is especially suitable for structural fire-fighters requiring rugged protection in environments with heat hazards.

Denios, Stand - 4B14

Product: DENIOS Connect

This is a storage system for hazardous substances. Regardless of whether the user is on the premises or not, DENIOS Connect's active sensors continuously monitor the product storage conditions: inside temperature, gas concentrations, and spills. If a fault occurs,

evalera@ifema.es

Salón Internacional de la Seguridad
International Security, Safety and Fire Exhibition

Press Release

DENIOS Connect sends a real-time alarm by SMS or e-mail to the user's smartphone, tablet, or computer.

Siemens, S.A. Stand - 10E11

Product 1: SINORIX SDU

An extinguisher cut-off system to eliminate the need for over- and under-pressure grids in systems with Novec 1230 extinguishing agent. Extinguishing systems using Novec TM 1230 extinguishing agent need depression and overpressure relief grids. This is because discharge of the agent causes both effects to avoid possible structural damage to the building in which they are installed, especially in the case of rooms constructed with fragile materials, such as plasterboard or glass. The Sinorix TM SDU (Smart Discharge Unit) system has a liquid phase sensor and PLC controller that can stop the propellant gas outlet after discharge of the extinguishing agent to prevent the nitrogen propellant being discharged into the hazard area, reducing or avoiding the need for pressure relief grids.

Siemens, Product 2: SINORIX LIBESS

A combined detection and extinguishing system for fire protection in containers with lithium-ion batteries. Lithium-ion battery power storage systems cover a wide range of applications, including stationary energy storage in smart grids and UPS. These systems combine high-energy materials with highly flammable electrolytes, so there is a potential fire hazard that significantly impacts an installation's viability.

Siemens, Product 3: DESIGO CC Management Platform with Real-Time BIM Viewer

Desigo CC is the integration platform designed by Siemens to support in-building facility management needs for HVAC, lighting, fire protection, electrical and security installations. Desigo CC helps ensure safety and productivity more efficiently. Desigo CC's customisable interface supports multiple user profiles to provide each user with the critical information they need at their fingertips. Its easy-to-read workflow interface shows each event's severity and category. It also shows the number of unrecognised events in the building.

Urban Technology, SL Stand - 8D21

Product: SHUB STABILISATION SYSTEM

A simple and effective solution for working quickly and safely with a standard spreader as a lifting device. Quick and easy to use due to its light weight and small dimensions, the SHUB is handy for everyone. The operator does not have to adjust anything, and the spreader fits into the SHUB and can be lifted directly. The SHUB can stand on an uneven surface because the inclination angle is adjusted automatically, ensuring safety as the spreader cannot move.

Viking, Stand - 8B00

Product: Fendium Polymer-Enhanced Steel Pipes

Fendium steel pipes with integrated polymer are the solution for protecting against corrosion both inside and out as they have an integrated polymer layer. Correctly used, Fendium pipes have a considerably longer service life than those that have not been fully

Press Release

treated. Viking provides a ten-year corrosion warranty for their Fendium tubing (*subject to agreement), far exceeding the industry standard. Fendium increases the durability, safety and efficiency of fire suppression systems.

SECURITY

Accesorios y Resortes, S.L, stand - 10F11

Product: AYR V-LOCK Industrial Vehicle Lock

AYR's V-LOCK is a security lock for cargo compartments in industrial vehicles. It uses ultra-secure NFC-UF technology instead of conventional mechanical key cylinders. It uses bracelets rather than keys, and locking is automatic, giving it significant advantages over mechanical locks.

Ajax Systems, Stand - 10H08

Product 1: Ajax Hub 2 Plus

Hub 2 Plus is a security system control panel for Ajax wireless devices. It acts as a hub to coordinate communication between a security system and Ajax applications through its cloud server, navigates the cooperation of system devices, automates security, and supports visual alarm verification. The Hub 2 Plus is suitable for both small installations and those as large as those requiring Grade 2 protection. It is capable of protecting even the most complex premises in business centres, factories, and multi-story villas with outbuildings. The new hub can control up to 200 devices.

Ajax Systems, Product: MotionCam Outdoor

MotionCam Outdoor is a wireless outdoor motion detector with an integrated camera for alarm verification. It has MotionCam Outdoor motion detection, two PIR sensors and an exclusive algorithm to filter out thermal interference and ignore pets, a two-way radio protocol based on TDMA: 0.15-second alarm transmission, radio frequency hopping, and interference detection. Up to 200 MotionCam Outdoor detectors can communicate collision-free within one system. Visual verification. A series of up to five photos is sent after a motion alarm and displayed in the Ajax application. A built-in HDR camera with a wide-angle lens takes sharp pictures in any weather. A powerful IR backlight is activated if shooting in low light.

Bosch Service Solutions S.A.U, Stand - 10 E14

Product 1: 8000i X Series

The FLEXIDOME IP 8000i X camera has a 1/1.8" sensor, HDR X technology, and 4.1 MP resolution. It provides a perfect balance between high resolution and extremely low illumination sensitivity with starlight X technology, ensuring highly-detailed images even in the most challenging situations. HDR X enables the camera to capture video with a wide dynamic range at different light levels without HDR artefacts and motion blur on moving objects. Easy capture of fast-moving objects with a frame rate of up to 60 frames per second at the same 4.1 MP resolution.

Press Release

Bosch Service Solutions SA Product 2: BVMS Map-Based Tracking Assistant

BVMS is a data-driven video management system that supports predictive solutions by establishing a decision centre delivering actionable insights to customers so they can make informed decisions. With BVMS 11.0, operators can easily prevent, detect, and solve security and safety-related incidents by visualising the right information at the right time. The modular, resilient system offers maximum security through its seamless integration possibilities with the broadest range of security domains and applications. This means it can add value at every touch-point, from video management and access control to intrusion detection and crowd control. Its newly-released map-based tracking assistant ensures operators will never lose track of moving objects and people across multiple cameras.

Casmar Electrónica, Stand - 10 E02

Product: Casmar BlackBird

Blackbird is a Robotic Aviation Security solution, a fully-autonomous drone with the ability to respond quickly and automatically to alarm events. It performs flight missions of scheduled rounds and allows live video streaming to multiple users simultaneously, with one visible and one thermal camera. The entire process is autonomous: take-off, patrolling, landing, and reloading. It is an excellent solution for perimeter protection and surveillance rounds for security or maintenance of facilities. It is also a suitable security solution for law enforcement and public safety.

Dahua Iberia, SL Stand - 10F06

Product 1: Dahua ITC431 AI Enforcement Camera

The Dahua ITC431 AI enforcement camera is suitable for roadway scenarios as each camera can cover two lanes and can detect vehicles at speeds up to 120 km/h. Traffic flow detection can generate statistics on vehicle flow, average speed, vehicle type, lane occupancy, average headway time, average queue length, and road condition. Traffic event detection includes illegal stopping of motor vehicles on the road, traffic congestion detection, and timely detection of potential accidents to ensure traffic safety. Video metadata include vehicle type, colour and brand or logo, plenty of attributes to facilitate vehicle tracking and searching.

Dahua Iberia, S.L. Product 2: Thermal Series PT9621

Featuring a dual-lens PTZ camera, this series combines a thermal camera for monitoring in total darkness and an optical camera to confirm details up close, providing an all-in-one solution that is especially beneficial for long-distance video surveillance in outdoor applications. The selection of a laser range finder with a 640x512 cooled thermal sensor can detect a vehicle 20 km away and a human-sized target at 8 km in great detail. All functions include tripwire violations, intrusion, automatic tracking, people and vehicle classification. It can satisfy real requirements and makes video analysis efficient and accurate.

Dahua Iberia, S.L. Product 3: Dahua Radar Series

Press Release

This radar solution is based on the customer's weak points, with an independent radar tracking and monitoring program for trajectory tracking, combined with the video tracking of the PTZ camera. Provides wide-range, high-accuracy, 24/7 global monitoring.

Dorlet, Stand - 10 E13

Product: Virtual Credentials

Smartphone system for iOS and Android. It can be used with NFC and BLE (Bluetooth Low Energy) technologies, eliminating the need for physical cards and offering users and administrators greater convenience and security. It can be used in both OnTouch (proximity) and Button (remote) modes. Easy deployment of credentials (from DASSnet®) based on invitation e-mail. It has a capacity of up to 65,000 online readers and 65,000 wireless DOC (Dorlet On Card) readers per user on a single DMA (Dorlet Mobile Access) credential.

Gea Quality SLU, Stand - 4D25

Product: TruCal Technology for XCell Sensors

XCell® sensors with TruCal technology significantly reduce toxic gas leak detection failures by automatically performing periodic self-checks on the sensor to monitor its input. In this way, they can identify potential blockages that can prevent gas detection without manual checks.

This technology achieves several benefits: calibration intervals can be extended, and functional checks are no longer necessary as the user can be confident that the sensor is in good condition, measures accurately, and can detect gas. This is achieved by combining internal electronic sensor checking functionality (pulse checks) with an acoustic system that checks for blockages that would prevent gas from reaching the sensor (diffusion supervision).

Long Xiang Exportación Importación - Stand - 10H06 - 10H06

Product: Unicorn

Unicorn is an integrated surveillance platform with video inputs, storage and transfer and device management. It can connect and manage up to a thousand devices and two thousand HD video channels. It features Unified Camera Management, NVR, an easy recognition terminal, decoder, cloud devices, alarm panels, and door access control. Its main applications are in the retail, hotel and building management sectors. Its main innovation is its versatility and the capacity to connect up to 128 facial recognition terminals and a thousand IP devices in a single unit. It can receive and process up to a hundred images of vehicles or faces per second.

Optex Security BV Stand - 10G12

Product: REDSCAN Pro

REDSCAN Pro is a laser intrusion detection sensor that uses LiDAR technology to provide highly accurate detection even in difficult weather conditions, changing lighting, and complete darkness. The sensor can be mounted indoors or outdoors and has a detection range of up to a hundred metres in standard mode, allowing several large areas to be protected with a single sensor. The built-in assistance camera can record alarm events

on the device and save records as well as pre- and post-event photos and videos. The camera can also be used to adjust the sensor settings.

Siemens, Stand - 10 E11

Product: 02PN20v3

This arch metal detector has a built-in automatic system to detect people with fever. The 02PN20v3 is a high-performance arch with powerful detection capabilities for dangerous metal objects (firearms, knives). It also has excellent discrimination to avoid false alarms so frequent with CEIA. It also includes two additional features: a video camera to display a real-time video image of people passing through the archway and a thermal imaging camera for a real-time alarm if the person passing through the archway exceeds the set temperature threshold.

ZKTeco Europe, Stands - 10E05 + 10D09

Product: FMD 1.0

The FMD 1.0 is a cell phone detector designed for quick deployment as a stand-alone portable unit. It is compact, so one person can carry it, reducing operating costs. It has an intuitive display and a simple, robust interface. From exhibitions to conferences, from nightclubs to corporate events, from government facilities to private property, warehouses and cargo centres, prisons and correctional facilities, FMD 1.0 is an innovative checking solution for enhanced security.

OCCUPATIONAL SAFETY 14

Diadora Utility, Stand - 4E30

Product: FLY LITEBASE MATRYX LOW

Diadora Utility's FLY safety footwear range combines light weight with maximum performance. It was created to be a revolutionary product for the occupational safety sector: a product with a sporty design and unprecedented lightness, a synthesis of innovation, technology, comfort, and performance. FLY Litebase Matryx low S3 SRA SRC ESD is a low S3 water-repellent safety shoe made of Matryx multi-fibre technical fabric, breathable, water-repellent and abrasion-resistant. This shoe has a weight of 365 g (S3 - half pair), and there is also an S1P version with a weight of 355 g (half pair).

Hispano Industrias Svelt, S.L. - Stand - 4A10

Product 1: COMBI PRIME

An ultra-compact telescopic aluminium stepladder with a triangular profile resistant to twisting and ageing. This ladder uses a patented telescopic system with a triangular tube profile to avoid twisting, making its structure robust and durable. This ladder can be extended to the desired height section-by-section. It is very compact when closed and can be carried comfortably under the arm.

Hispano Industrias Svelt SL, Product 2: Lock Jaw Ladder

An accessory for anchoring ladders leaning on gutters. It consists of a system of hooks and clamps and locking mechanisms and is easy to install. It anchors the ladder to the

gutter so that the user can climb off it and onto a roof to work without the danger of losing balance and falling. Lock Jaw Ladder Grip is a system of hooks to anchor the ladder to the roof gutter so that the ladder is fixed, and the operator can climb up and down the ladder repeatedly until the job is completed. There is no need for a second operator to stand at the bottom of the ladder to hold it, except on the first ascent to position the hooks and the last descent after removing them when the work is finished.

Sensotran, S.L. Stand -4E20

Product 1: G7c Connected Personal Monitor.

The most innovative feature of this device is its direct connectivity using its multi-operator SIM card and its GPS module, which enables: Switch on and ready-to-go, real-time fleet monitoring from anywhere, real-time alerts by SMS and e-Mail, direct, automatic cloud data storage and organisation in automated Blackline Analytics reports, automated data logging, remote device management (firmware configuration and updates), compliance panel calibration and bump test in real time, two-way hands-free voice calls, several devices in one, gas detection, dead man's switch, panic button, GPS, walkie talkie, emergency mobile phone, mass notifications to field devices, self-monitoring with real-time map alerts with visual and acoustic control room alerts, and 24/7/365 monitoring with Blackline staff available.

Sensotran, S.L. Product 2: ISens

A wireless gas detector with cloud software for real-time functions. It has a built-in LoRa modem with a range up to 7 km, optional 2G/3G/4G multi-operator SIM card with GSM booster for direct connectivity and cloud communications, alkaline battery power supply, IP67, temperature and humidity sensor. It can be configured with over thirty sensors to detect toxic gases, explosives and volatile organic compounds. It has cloud-based software for control, monitoring, configuration and data analysis, GPS tracking map and real-time device status, customised planimetry of the customer's installation, automatic sending of notifications and alerts to cell phones and by e-Mail, automated data collection with access to Sensotrak, and mass, group or individual device configuration using a web interface.

Svantek España, S.L. Stand - 4F19

Product: SV104B

The SV104B, in standard and ATEX versions, is a personal noise dosimeter compliant with the Welmec Guide (software certification) and with the ICT/155/2020 (Legal Metrology in Spain). It is Bluetooth® compatible to communicate with the Assistant smartphone app. For occupational noise measurements to ISO 9612 and Royal Decree 286:2006, as well as OSHA, MSHA and ACGIH regulations, all settings are configurable using the PC software and can be stored in the dosimeter's memory as configuration files that can be selected directly from the dosimeter's keypad. The dosimeter has a very robust MEMS microphone with a lifetime warranty. A built-in triaxial vibration accelerometer detects all vibrations affecting noise measurement results. They are logged in the result history to be easily excluded from dose calculations. It also has an accelerometer to detect when the worker is not using it, and this is also logged.

SICUR FORUM examines the current situation and challenges ahead in the security sector at SICUR 2022

Industry experts will meet at SICUR to analyse and discuss topics such as new challenges and demands in global security, the procurement of security services, operational safety and security in emergency management, pandemic crisis management, new technologies for incident resolution, innovation and new challenges in firefighting, coordination between public health services and occupational health and safety, new scenarios in occupational health and wellbeing, as well as an extensive programme devoted to cybersecurity.

Madrid, 1 February 2022 - SICUR FORUM, the programme of technical seminars at the **SICUR 2022** International Safety and Security Trade Fair will run from **22 to 25 February**. It provides a space for analysis and debate that will address the most topical issues and the new challenges in security, as part of a critical event that will reflect the importance of this sector for the functioning of the economy and the progress of society.

Organised by IFEMA MADRID, in partnership with the most important associations and entities representing both industry professionals and consumers, **SICUR FORUM** offers four days of content focused on information and training, helping to strengthen knowledge and bring safety and security to the forefront of attention for both professionals and consumers.

The SICUR FORUM follows the same organisational format as the trade fair, by sector: Security, Fire Safety and Emergencies, Occupational Health and Safety, and SICUR Cyber.

Security

The Security block will host the seminar presenting the **Cluster 3 HORIZON EUROPE FORUM 'Civil Security for Society'**, organised by the Centre for the Development of Industrial Technology (CDTI), as well as the conferences **'Women and Security: we drive change in trends'** by the Women and Security Observatory, and **'Are we Contracting Satisfactory Security Services?'** from the Business Confederation of Security and Service Users (CEUSS). There will also be a session entitled **'ERTZAINZA's Commitment to Innovation: some examples of impact'**, while AES is organising the seminar **'40 years of boosting the industry: global security, new challenges and demands'**, which will be organised into four talks discussing the **disappearance of cash in Spain, biometrics in private security, digitalisation in private security and EU Next Generation funds, and cybersecurity standards for technology products and services in the security industry**.

Fire Safety and Emergencies

At the forum dedicated to fire safety and emergencies, the Valencia Local Police will present **'DARLENE - Augmented Reality and the Security Forces for Critical Incident Resolution'** and **'STAMINA - for Pandemic and Security Crisis Management: the first international forum demonstrating technological solutions'**. The seminar **'Pre-Commercial Public Procurement: preliminary market consultation for the European iProcureSecurity Project'**, organised by the 061 Health Emergency Centre of the Regional Government of Andalusia, will discuss the pre-commercial acquisition of innovative triage management systems and the strengthening of resilience and interoperability of emergency medical services.

There will also be seminars on **'Operational Safety and Security in Emergency Intervention: basic aspects and linkages'** and **'Legislation on Emergencies and Fire Services: current situation and opportunities'**, both organised by the Spanish Firefighting Association (ASELF). There will also be a seminar on **Drones** from the Mossos d'Esquadra and a session dedicated to **'Innovation and New Challenges'**, organised by the Association of Fire Protection Engineering Professionals (APIC). Meanwhile, the Spanish Association of Fire Protection Societies, TECNIFUEGO, is organising a session addressing issues such as **remote inspection for safety optimisation, options for protection against storm risks, early warning in industrial facilities and forested areas, new technologies - including drones and artificial intelligence - in the field of fire detection, fire protection engineering in the prevention of occupational risks, and digitalisation of services associated with fire protection maintenance**. To close the fire section, there will be a session on **'Lessons Learned'**, organised by the Association for Risk Prevention and Protection (CEPREVEN) and the Professional Association of Fire Technicians (APTB).

Occupational Health and Safety

With respect to occupational health and safety, **SICUR** will hold a session on the **'Coordination of Public Health and Occupational Health and Safety in the Control of Pandemics'**, organised by the National Association of Accredited Preventive Entities (ANEPA), the National Association of External Prevention Services (ASPREN) and the Spanish Association of Occupational Prevention Services (AESPLA). There will also be a seminar on **'New Challenges in Occupational Health and Wellbeing: addressing psychological and emotional health and prevention applied to new models for work'**, organised by the MAPFRE FOUNDATION, AESPLA and the National Institute of Occupational Health and Safety (INSST), and a session on **'Personal Protection, Mobility and Sustainability'** from the Association of Personal Protection Equipment Companies (ASEPAL) and the Mapfre Foundation.

Cybersecurity

Within the framework of **SICUR Cyber**, the Borrmarkt publishing house is organising a series of talks by experts on various topics related to cybersecurity, including corporate security, electronic security technologies and other areas.

Salón Internacional de la Seguridad
International Security, Safety and Fire Exhibition

Press Release

The first seminar will focus on **cybersecurity in the digitalisation of private security, corporate protection, the Spanish cybersecurity ecosystem, what to do after a cyber-attack, and the investigation of cybercrime on the web.**

The second day of SICUR Cyber will feature the **Guide to Best Practices in Physical Security Projects** and explore issues such as **Agents Involved in Cybersecurity in Physical Security Systems, Cybercrime, 2022 EU Funding for Security** - European Programme Cluster 3: Civil Security for Society, **Cybersecurity, Surveillance and Access Control** and **Cybersecurity and Mobile Phones.**

The third block will focus on providing a **Regulatory Itinerary in Cybersecurity** and will discuss **Automation of Comprehensive Security Processes in Critical Infrastructures, Corporate Security and Cybersecurity** and **Cybersurveillance: research from open sources on the Internet.** The day will end with talks entitled 'That will never happen to me' and 'How to ruin your business the easy way'. The last day will be dedicated to **Cybersecurity Culture for Businesses and Cybersecurity Talent and Training Initiatives.**

These activities will involve representatives from the National Institute of Cybersecurity (INCIBE), the National Police, the Civil Guard, the Spanish Data Protection Agency and the Department of National Security, as well as other associations and entities including the Spanish Association of Security Engineers (AEINSE), the Spanish Association of Integrated Security Managers (ADSI), AENA, AES, the Catalan Association of Security Companies (ACAES), the Spanish Security and Crisis Alliance (AESYC), the Industrial Cybersecurity Centre (CCI), the Cybersecurity Coordination Office (OCC), Cluster 3, RKL Consulting, the Observatory of Integrated Safety in Hospitals (OSICH), the Business Confederation of Safety and Services Consumers (CEUSS), the National Cryptology Centre (CCN), the WOMEN4CYBER Foundation, Cyberwall and CIBERLEAGUE.

SICUR CYBER at SICUR Examines Cybersecurity Challenges & Solutions

Over the four days of the International Security Exhibition, leading experts will address a range of cybersecurity issues in corporate security and e-security technologies, best practices, and cyber training and cyber talent.

Madrid, 14th February 2022. SICUR, the leading international event for the integrated security industry, is organised by IFEMA, next 22nd to 25th February at Feria de Madrid. Like previous editions, it will be a reference point for trade visitors in all security fields.

Its varied content will focus on the accelerating digitalisation process in both professional and social. The **SICUR CYBER space at SICUR 2022** will focus on cybersecurity, the threats companies and individuals face, and the solutions and protection systems to address them.

SICUR CYBER has organised a busy programme of panel discussions and presentations in collaboration with the specialised publications, **Seguritecnia** and **Red Seguridad**. Leading experts will participate over the four days of SICUR to address various topics related to cybersecurity in the field of corporate security or electronic security technologies, among others.

The programme is sponsored by **AXIS Communications, Dorlet**, and **RKL Integral**. It will kick off on Wednesday, 22nd February, under the general heading **Cybersecure Security**. This block will begin with a presentation entitled **It's Time We Addressed Cybersecurity By and For Security Professionals** by the Borredá Foundation. This will be followed by a **Cybersecure Access Control** system by the company DORLET, to continue with the panel dedicated to **"Cybersecurity in the digitalisation of private security"**, which will include presentations by the Central Private Security Unit of the National Police, the Spanish Association of Security Engineers, AEINSE, Spanish Association of Security Companies (AES), the Catalan Association of Security Companies (ACAES), and Spanish Security & Crisis Alliance (AESYC). There will be a session by INCIBE on **Business Protection**. Seguritecnia and Red Seguridad will chair the Spanish Cybersecurity Ecosystem session. The National Police will explain **What To Do When You've Been Cyber-attacked**, and Civil Guard will talk about **Investigating Cybercrime on the Net**.

The morning of Thursday, 23rd February will focus on **Good Cybersecurity Practices** with the presentation of the **Guide of Good Practices in Physical Security Projects** by members of AEINSE's working group. It will cover issues such as **The Importance of Cyber-secure Surveillance** in the presentation by AXIS Communications. **Agents Involved In Cybersecurity of Physical Security**

Salón Internacional de la Seguridad
International Security, Safety and Fire Exhibition

Press Release

Systems with representatives of AEINSE, the Spanish Association of Integral Security Managers, ADSI, AES, AENA, ESYS Foundation, and Industrial Cybersecurity Center, CCI. And a presentation on **Cybercrime** by the Analysis Section of the Cybersecurity Service of the Ministry of the Interior's OCC.

Thursday afternoon will be devoted to **European Funding for Security** with a presentation on the **European 2022 programme, Cluster 3: Civil Security for Society**. Another topic addressed will be **Cybersecurity: Surveillance & Access Control** by the Spanish Data Protection Agency. And there will be a presentation on **Cybersecurity & Mobile Phones**.

The block on the 24th, in the morning session, will revolve around the **Process Automation**. An expert lawyer will give a presentation about the **Regulatory Itinerary in Cybersecurity**. RKL Integral will talk about the **Automation of Comprehensive Security Processes In Critical Infrastructure**. The session on **Corporate Security & Cybersecurity** will be with the participation of AESYC, the Observatory of Comprehensive Security in Hospitals, OSICH, and the Business Confederation of Users of Security & Services, CEUSS.

That afternoon will focus on **Data Integrity**, discussing issues such as **data lifecycle** and **risk management in data integrity**. There will be a talk about **Data Integrity Use Cases In Laboratories**, and **Process Digitalisation and Real Integration Solutions to Improve Information Integrity**. The session will close with presentations on **ISMS (Information Security Management System) and ENS (National Security Scheme): New Threats Arising from Digital Transformation**, and **ENS Technical Countermeasures to Support Data Integrity Management**, the latter with the participation of the National Cryptologic Centre.

SICUR CYBER will close on Friday, with a session on **Training and Cyber Talent** to discuss **Cybersecurity Culture For Businesses (DSN)** in a presentation by the National Security Department. And there will be a talk on **Training Initiatives and Talent In Cybersecurity** with the participation of WOMEN4CYBER, CIBERWALL and CIBERLEAGUE.

SICUR RESILIENCIA to Analyse Comprehensive Security Management and Current Risks

SICUR's dedicated space for Business & Organizational Resilience is organised in partnership with PESI. It will host a workshop on Horizon Europe's Cluster 3: Civil Security for Society R&D&I call and the S2R International Congress (SAFETY, SECURITY AND RESILIENCE INNOVATION & RESEARCH IN EUROPE) on 22nd and 24th February.

Madrid, 15th February, 2022. The International Security Exhibition, organised by **IFEMA MADRID** from 22nd to 25th February, will host a **workshop on the Horizon Europe's Cluster 3: Civil Security for Society R&D&I call** and the **S2R International Congress (SAFETY & SECURITY RESEARCH IN EUROPE)**, in the space dedicated to the modern concept of Business and Organisational Resilience, **SICUR RESILIENCIA**, coordinated by **PESI (Spanish Technology Platform for Industrial Security)**.

The **R&D&I** workshop on **Horizon Europe's Cluster 3: Civil Security for Society**, organised by the Centre for the Development of Industrial Technology (CDTI), in partnership with the European Commission, MADRIMASD FOUNDATION, PESI and other associations, will take place on Tuesday, 22nd February. The workshop will focus mainly on a presentation of the document **Enhancing Security through Research & Innovation** by Andrea de Candido, deputy head of the security research unit of DG HOME. The Cluster 3 National Contact Points will present flash information on the topics and priorities to be funded under the 2022 Cluster 3 call. There will also be a round table of relevant entities and sector associations in this programme, contributing their vision and recommendations for successful participation in the calls for proposals. Finally, the collaboration agreements between CDTI and the Defence and Interior ministries will be presented and the activities associated with them.

This workshop will be followed by a European Brokerage Event to bring together companies, research entities, and universities involved in the technology areas relevant to the call to facilitate networking and preparation of proposals for the 2022 Cluster 3 call with the participation of Spanish entities. This session is held in partnership with the MADRIMASD FOUNDATION, a member of the EEN (Europe Enterprise Network).

International S2R Congress (SAFETY & SECURITY RESEARCH IN EUROPE)

SICUR RESILIENCIA will also be the venue for the **S2R Congress (SAFETY, SECURITY AND RESILIENCE INNOVATION & RESEARCH IN EUROPE)**. It will be opened on Thursday, 24th February by Dr Enrique Belda, Deputy Director-General of Information Systems & Communications for Security at the Ministry of Interior, and the President of PESI, Ángel González Martínez of Iberdrola Spain.

Press Release

The Congress will be organised around four panel discussions. The first will address the **Business Resilience: Governance & Risk Management Models for Business Continuity**, with the participation of CONTINUAM Forum and PESI (European vision). The second will focus on **Integral Security (Security & Cyber) and Resilience of Critical Infrastructures and Value Chains**, moderated by CNPIC (TBC), with the participation of AEINSE, ADSI (TBC), AES, ASIS Spain, AECRA, CCI Cybersecurity and ADISPO-AIMCSE. The session on **Security and Industrial Reliability (Digitalisation & KETs)** will be moderated by DGIPYME (SG quality and Industrial Security), with the participation of Eurecat, AEIS-INCOSE, ISA Spain Chapter, Sisteplant (AEM). The session on **Human Factors in Resilience (Preventive Culture, Occupational Health, Psychosocial Risks)** will be moderated by the Director of the INSST, and with the participation of IBERDROLA, CGPSST/CGRICT, VisionZero (TBC), AEPSAL and ASPA-ANEPA.

PESI will hold its **General Assembly** in the afternoon, chaired by the Ministry of Science and Innovation's National Research Agency (AEI) and Iberdrola. This assembly will include a presentation of the **Platform Action Plan**. PESI members will give presentations about **Innovations & Technologies for Security & Resilience**. They will discuss, among other topics, the **Gamification for Capacity Building In Crisis Situations** by GA Group, and **The Worker 4.0 Paradigm and SWE (Safe Working Environments)**, by TECNALIA. The Congress activities will conclude with the first **Women & Innovation in Security Awards**. These Awards will spotlight these women's outstanding professional careers, for their vision and contributions to the different facets of security, their innovative or research activity (R&D&I) or their important leadership in associations and government to help break the sector's glass ceiling.

About Resilience

Developing resilience calls for comprehensive management of different perspectives of security and current risks operational & industrial, environmental, human factors, security, cybersecurity). This is why new capabilities and tools are needed in decision support companies, especially those responsible for the different functional areas related to security and business continuity. But it especially requires an advanced Governance Model that allows the development of adequate strategies and coordination of the related areas within the company. Combining this model with intelligence, technologies and other specific systems to improve resilience can ensure business continuity and rapid service recovery following a crisis or exceptional event.

To achieve this, the PESI Ecosystem proposes a new Resilience Governance Model. The model includes a comprehensive vision of Risk Management and Business Continuity, both for driving companies and their value chains. These value chains cover different industrial fields (such as manufacturing, process industry, energy), utilities networks (including gas, water), transport infrastructure, industry services (maintenance, logistics) and essential services for Society (vision of the safe and Resilient City-Region), managed by Critical Infrastructure Operators.
